

Carefree decking

1. Easy to mount
2. Torx screw
3. Reinforced sides
4. Solid structure
5. Invisible assembly
6. Brushed sides
7. Hollow boards

Naturally high-quality

Dumadeck® terrace decking is made from a homogeneous combination of wood fibres and plastics. It is exactly in this unique combination of nature and technology where its strength is. The advantages and strengths of both materials are indeed merged into these high-quality boards.

No deformation

The natural aspect and the appearance of brushed wood go hand in hand with the sturdy and durable qualities of synthetic materials. This also ensures that our decking is waterproof and will not swell or warp. It is also not subject to the well-known splitting of regular decking.

Safe for children's feet

Thanks to the durable composite material, the boards do not rot or splinter. The whole family can kick off their shoes and walk on it barefoot, thus enjoying the pleasant contact with the splinter-free decking. Dumadeck® is therefore perfectly suited to place around your swimming pool. The brushed finish also provides a perfect anti-slip surface.

Enjoy life, maintenance-free

A warm summer day, a cool evening breeze? Enjoy it. Fully. Without worrying about the maintenance of your beautiful decking. You will no longer have to scrub and clean for long hours to clean and prepare your decking after winter. The composite material is much easier to maintain since it is not affected by moss or mould. In addition it is resistant to termites and other insects. Even a high-pressure cleaner is no problem for Dumadeck® under normal use.

Come rain or sunshine

Almost all products fade when exposed to UV rays and changes in weather conditions. With Dumadeck®, fading is limited. And after some time your outdoor terrace will maintain its final, equal colour. Thanks to our high-tech mechanical production there is no quality difference between our boards as opposed to regular hardwood.

Easy and fast installation

Installing Dumadeck® is a breeze and does not require special equipment. With an ingenious hidden click system with aluminium fasteners the boards are screwed into a bearing structure on which the decking rests. Screws are no longer visible, which is also safer for the feet.

Environmentally friendly

At Dumaplast we attach a lot of importance to the environment. That is why Dumadeck® is environmentally friendly and recyclable, since we produce our decking using wood fibres. As a result, no tropical hardwood trees need to be cut down if you opt for Dumadeck® decking. Furthermore our boards do not contain toxic substances.

The advantage of Dumadeck® compared to other composite boards

Unique shape and sturdiness

Our boards' profile is unique and is completely different from other composite boards. Due to its solid and composite structure, Dumadeck® is much stronger, among many other features. There is considerably less risk of damage due to our boards' increased impact resistance. In addition, our boards absorb a lot less water than comparable composite boards.

Stairs finish

No finishing hardware

Dumadeck® boards are also sanded and brushed on the sides. Due to this highly realistic effect, no finishing trims are required as is the case with other composite boards. The sides of your terrace can be perfectly finished by mitring the boards. Stairs or elevations also no longer present a problem. All this is not only more attractive, but it also saves you time and money since no additional end caps have to be purchased and installed. You can then finish the edges of your terrace with our baseboard.

Baseboard

Invisible mounting

Since our boards are held in place with hidden fasteners, the risk for the floating sides to break off due to falling objects no longer exists. And with the hidden click system your terrace will be more attractive since the screws are almost invisible. Our screws and the screw insert (bit) feature the professional TORX-system which makes installation even easier. Our click systems are available with a space of 5 mm between the boards. The terrace boards are screwed on our beams made from wood composite. You can find the complete installation instructions on www.dumaplast.be.

HOLLOW GROOVED (code 162) 6 boards/m²

HOLLOW SMOOTH (code 163) 6 boards/m²

SOLID GROOVED (code 149) 7 boards/m²

SOLID SMOOTH (code 150) 7 boards/m²

Standard available in 2.4m and 4m lengths.

SUPPORT BEAM (code 146)

BASEBOARD (code 147)

AVAILABLE COLOURS
grey / brown / black

GROOVED

SMOOTH

Hardwood	Dumadeck®
Swelling as a result of water absorption	Little influence of water
Easy formation of moss and mould	Little or no formation of moss and mould
Slippery when wet	Less slippery
Heavy maintenance	Low or no maintenance
Not resistant to insects	Resistant to insects
Risk of warping and splitting	Minimal expansion and warping
High discoloration due to sunlight	Limited discoloration due to sunlight
Splinters	No splinters
Requires regular oiling or painting	No oiling or painting required
